Stainless Steel Finishing

The whole side of the boat is finished with stainless steel profile, this guarantees more resistance and best finish.

FibraFort
188
joy

Gel Coat Painting

One of the great differentials is the gel coat.

A type of resin that, after application, results in a smooth, shiny and defined color finish, which acts as both coating and protection. Unlike common paints, it forms several coats, so it can be easily sanded and polished and avoids fading.

Fibrafort
188
joy

Step Vee

Step Vee is a unique Fibrafort Boats geometry. This geometry helps to reduce glide time and consequently fuel consumption.

Fibrafort
188
joy

Anti- Corrosion

All parts in stainless steel receive a layer of rubber between the fiber and the finish.

This finish prevents corrosion of the stainless steel part in direct contact with salt water.
